Appendix B — Sample SIC Sector Output

1. Executive Summary

AI Lane Ltd holds the United Kingdom's only continuously-maintained, deeply-enriched Employment Tribunal intelligence estate. Built over 18 months from the complete corpus of publicly promulgated HMCTS tribunal decisions, the estate comprises 131,650 decisions, 78,699 unique employer profiles, and 34,205 records enriched to a 171-column analytical schema under AiLane's proprietary ACEI classification taxonomy.

This is not raw data. It is structured, classified, outcome-linked intelligence — continuously updated from HMCTS monthly releases, enriched with proprietary signals including representation quality, judge criticism indicators, statutory breach mapping, and protected-characteristic claim patterns. No comparable product exists in the UK market.

We are approaching Dun & Bradstreet as a strategic data supplier, not as a customer. AiLane's intelligence is designed to integrate directly into D&B's Data Cloud, enriching UK company records with a litigation-risk dimension that enhances credit scoring, insurance underwriting, supply chain risk management, and due diligence products.

This proposal presents four commercial packages, ranging from a sector-level risk index at entry level to a full exclusive strategic partnership. Each package is structured as an employer-level rollup product — no claimant personal data is included in any commercial output, and all products operate within the UK GDPR-safe perimeter established by our internal legal review.

Packages 1, 2 and 3 are offered on a non-exclusive basis and may be licensed to multiple counterparties across complementary verticals — including credit bureaus, insurance underwriters, and enterprise risk platforms. Package 4 provides an exclusivity window that prevents competitor access to the estate.

The indicative commercial envelope is £120,000 to £3,500,000 per annum depending on package scope and exclusivity, with pricing calibrated to deliver demonstrable return on investment through D&B's existing distribution to approximately 215,000 global clients.

AiLane operates an AI-native delivery model. Our enrichment, classification and data production infrastructure is built on large language model automation, not traditional software engineering. This enables pilot delivery in days rather than months, bespoke data cuts at near-zero marginal cost, and continuous quality improvement as model capabilities advance. The proposed engagement timeline reflects this capability: 90 days from first meeting to production delivery.

2. About AI Lane Ltd

AI Lane Ltd is a UK-registered data intelligence company specialising in employment law analytics. Founded in 2024, the company builds structured intelligence products from publicly available legal-regulatory sources, with a focus on UK Employment Tribunal outcomes.

Attribute	Detail
Registered name	AI Lane Ltd
Company number	17035654
ICO registration	00013389720
Jurisdiction	England and Wales
UK Trademark	UK00004347220 (Class 42) — 'Ai Lane'
Core competence	Employment Tribunal intelligence: extraction, classification, enrichment and analytical delivery
Primary asset	The ACEI Intelligence Estate — UK's only continuously-enriched tribunal intelligence corpus
Technology stack	Supabase (PostgreSQL), Anthropic LLM enrichment pipeline, ACEI classification engine, API delivery layer
Delivery model	AI-native — pilot data cuts delivered in days, not months; bespoke outputs at near-zero marginal cost
Data refresh cycle	Monthly (aligned to HMCTS publication cycle), with quarterly deep enrichment

AI Lane is not a recruitment platform, an HR SaaS tool, or a law firm. It is a data intelligence company whose core product is a structured, classified, continuously-maintained analytical estate. The company's business model is data licensing to institutional counterparties — credit bureaus, insurers, law-firm knowledge platforms, and enterprise risk providers.

3. The Intelligence Estate

3.1 Scale

Dataset	Records	Description
Tribunal Decisions	131,650	Complete corpus of HMCTS-published ET decisions — metadata, outcomes, awards, citations, judicial findings
Employer Profiles	78,699	Unique UK employers with tribunal history — aggregated exposure profiles, outcome distributions, sector benchmarks
Deep Enrichment	34,205	171-column analytical schema: ACEI classification, representation quality, statutory breach mapping, judge criticism, protected-characteristic patterns
SIC Sector Indices	615+	Aggregate tribunal intelligence per active SIC-4 code — sector-level

Dataset	Records	Description
		benchmarks, trend data, claim-type distributions

3.2 What Makes This Estate Unique

Several UK data providers offer raw tribunal decision text. None offer what AiLane holds — and the distinction is commercially decisive:

Capability	AiLane	Raw HMCTS corpus	Market alternatives
Structured outcome data (win/loss/settlement/withdrawal)	Yes — every decision classified	Unstructured text only	None at scale
ACEI 12-category classification	Yes — proprietary taxonomy	No	No equivalent exists
Employer-level aggregation	Yes — 78,699 profiles	No — decisions are claimant-centric	Partial (manual, small scale)
Representation quality scoring	Yes — algorithmic	No	No
Judge criticism indicator	Yes — extracted and flagged	Buried in free text	No
Statutory breach mapping	Yes — Act and section level	Unstructured citation only	No
SIC sector cross-reference	Yes — SIC-4 mapped	No sector linkage	No
Award distributions (mean, median, band)	Yes — per employer and sector	Award figures scattered in text	No systematic extraction
Quarterly refresh from HMCTS	Yes — automated pipeline	Manual download	Sporadic at best
API-ready structured delivery	Yes — JSON/CSV/DUNS-keyed	PDF/HTML documents	No

The HMCTS source corpus is publicly available under the Open Government Licence v3.0. The raw data is not the moat. The moat is 18 months of continuous extraction, classification, validation, enrichment and analytical structuring — investment that would cost an equivalent operation £150,000–£300,000 to replicate, plus £30,000–£60,000 per year in ongoing maintenance, and 12–18 months of elapsed time.

3.3 The ACEI Classification — Proprietary Taxonomy

The Ailane Compliance Exposure Index (ACEI) is a 12-category classification system that assigns every tribunal decision to one or more exposure categories. Each employer profile carries an ACEI distribution — the proportion of their tribunal history falling into each category. This distribution is a fingerprint of the employer's litigation risk profile.

The ACEI taxonomy is a proprietary intellectual property of AI Lane Ltd. It is not derived from any third-party classification system. Database right under the Copyright and Rights in Databases Regulations 1997 (SI 1997/3032) subsists in the enrichment schema by virtue of the substantial investment in verification and presentation of the contents. Copyright in the taxonomy as a literary/compilation work under CDPA 1988 s.3(1)(a) is under formal review.

An overview of the 12 ACEI categories is provided at Appendix A. Full methodology disclosure is available under NDA.

4. Market Context — Competitive Landscape & M&A Signals

The business information and risk analytics market is undergoing a period of accelerated consolidation. The following intelligence is drawn from verified public filings, press releases and regulatory disclosures. It is relevant to Dun & Bradstreet's evaluation of this proposal because it establishes the competitive environment in which employment tribunal intelligence will be acquired and monetised.

4.1 Consolidation in Employment & Workforce Data

Employment-related data has become an active M&A target across the credit bureau and verification sectors. Three transactions in the past twelve months signal institutional demand for precisely the class of data that AiLane holds:

Acquirer	Target	Date	Relevance
Experian plc	Konfir (UK employment & income verification)	April 2026	Experian acquired Konfir to strengthen employment verification at scale across 6,000+ UK businesses. Konfir combines Open Banking, payroll and tax data for up to six years of employment history. This validates institutional demand for structured UK employment data — tribunal intelligence is the risk-side complement to verification-side data.
Equifax	Vault Verify (employment & income verification)	2025	Equifax's Workforce Solutions division — now generating over 40% of total Equifax revenue — acquired Vault Verify to expand The Work Number to 3 million employer records. Equifax is systematically acquiring every employment data source it can find. AiLane's tribunal intelligence is a dimension Equifax does not hold.
Equifax	Efficient Hire (cloud	2025	Further expansion of Equifax's employer data footprint into

Acquirer	Target	Date	Relevance
	recruiting & onboarding)		HR management and onboarding, targeting hourly-worker-intensive sectors — the same sectors with the highest tribunal claim volumes (hospitality, care, logistics, staffing).

4.2 AI-Native Data Companies Are Acquisition Targets

The market is assigning premium valuations to AI-native data and intelligence companies. AiLane's operating model — LLM-powered enrichment, near-zero marginal delivery cost, continuous quality improvement — aligns with the profile that strategic acquirers and PE sponsors are actively seeking:

Acquirer	Target	Date	Deal value	Signal
Accenture	Faculty AI (UK)	Jan 2026 (completed Mar 2026)	Undisclosed	Faculty — a UK AI-native services company working with Anthropic and OpenAI — acquired to scale Accenture's AI capabilities. Faculty's CEO became Accenture's global CTO. 400+ AI-native professionals absorbed. Validates that AI-native operating models command strategic premium.
IBM	Confluent	December 2025	$11.0 billion	Real-time data streaming and governance infrastructure. Signals that data pipeline technology — not just data itself — is valued at enterprise scale.
Clearlake Capital	Dun & Bradstreet	August 2025	$7.7 billion	Clearlake's stated rationale: 'unlock next-gen data solutions, support deeper integrations, and enhance enterprise decision-making' — with explicit reference to AI-based business insights. D&B under PE ownership faces pressure to demonstrate data asset expansion and revenue growth.

4.3 D&B's Competitive Position — Verified Intelligence

The following table summarises verifiable competitive positions in the UK business information and risk data market. No provider currently offers structured Employment Tribunal intelligence at employer level.

Provider	UK presence	Employment data capability	Tribunal intelligence
Dun & Bradstreet	~11,000 UK customers; £122.49M UK revenue (FY2024); DUNS registry; SIC-8 classification	Company firmographics, trade payment, credit scoring. No employment litigation signal.	None
Experian	Largest UK credit bureau;	Credit scoring, Konfir employment	None

Provider	UK presence	Employment data capability	Tribunal intelligence
Business	acquired Konfir (employment verification) April 2026; ICO enforcement notice October 2020 (data sourcing practices)	verification (6,000+ businesses). No litigation data.	
Equifax Workforce Solutions	AccountScore acquisition (UK open banking); The Work Number (3M US employers, limited UK)	Employer verification and income data (primarily US). UK footprint via AccountScore.	None
Creditsafe	27,000+ UK customers; 430M+ global company records; HQ Cardiff (500+ UK staff); acquired Graydon 2022	Credit reports, company monitoring, compliance screening. No employment-specific data.	None
Bureau van Dijk (Moody's)	Orbis database; 160 information providers; academic and institutional focus	Company financials, ownership, M&A data. No employment risk signals.	None
LexisNexis Risk Solutions (RELX)	~9,700 employees globally; 33 acquisitions to date; acquired IDVerse (identity verification) February 2025	Legal research, identity verification, insurance claims data. No structured tribunal analytics.	None
Verisk	14 UK acquisitions historically; Simplitium acquisition (extreme events); WTW collaboration on insurance pricing (June 2025)	Insurance analytics (EL, D&O, property). No employment tribunal data.	None

The competitive landscape confirms a gap: substantial institutional capital is flowing into employment-related data, but no provider has invested in structured tribunal intelligence. AiLane holds the only asset in this space. The question for D&B is whether to secure access to this asset — or allow a competitor to do so.

4.4 D&B's Own Strategic Trajectory

Three recent developments in D&B's public strategy are directly relevant to this proposal:

LSEG Partnership (October 2024): D&B entered a multi-year strategic collaboration with the London Stock Exchange Group to combine LSEG's capital markets data with D&B's private market data. This confirms D&B's appetite for third-party data partnerships that enrich its Data Cloud with complementary signals.

Databricks Partnership (2025): D&B was named Databricks Growth Data Partner of the Year, confirming investment in modern data infrastructure and analytics delivery — the same infrastructure into which tribunal intelligence would integrate.

Third-Party Risk Management growth (2024–2025): D&B's third-party risk management products grew over 20% year-on-year, driven by demand for risk analytics and API-delivered data. Employment tribunal intelligence is a natural extension of this product line.

5. The Opportunity for Dun & Bradstreet

Dun & Bradstreet's Data Cloud contains comprehensive records for UK companies — financial standing, credit scores, SIC classification, trade payment history, corporate hierarchy, and firmographic attributes. What it does not contain is any signal derived from the employer's history as a respondent in UK Employment Tribunal proceedings.

This is a blind spot. Employment Tribunal exposure is a material indicator across multiple D&B product verticals:

Credit Risk and Financial Standing

Companies facing serial tribunal claims incur direct costs (legal fees, compensation awards, management time) and indirect costs (recruitment difficulty, reputational damage, regulatory scrutiny). Academic research consistently identifies employment litigation frequency as a leading indicator of financial distress, typically manifesting 6–18 months before conventional credit signals.

Insurance Underwriting

Employer's liability, directors' and officers' (D&O), and professional indemnity insurance pricing depends on the employer's claims history. Tribunal data provides actuarial-grade signals — claim frequency, award distributions, statutory breach patterns — that feed directly into underwriting models. Insurance signals typically command 3–5 times the pricing of general credit-risk data. Verisk and WTW announced a collaboration in June 2025 specifically to enhance insurance pricing analytics — tribunal intelligence is a missing input to these models.

Supply Chain Risk Management

Fortune 500 procurement teams use D&B's supplier risk scores to evaluate vendor reliability. A supplier with 15+ tribunal claims in 36 months — particularly for health and safety breaches or discrimination — is a supply chain risk. This signal does not exist in D&B's current offering. D&B's third-party risk management products grew over 20% in 2024–2025 — tribunal intelligence extends this growth trajectory.

Private Equity and M&A Due Diligence

Acquirers need to know whether the target company has a history of employment litigation. Tribunal exposure is becoming a standard diligence dimension — particularly for workforce-intensive sectors (care

homes, hospitality, logistics, facilities management). AiLane provides this as structured, queryable data rather than manual court-record searches.

Competitive Differentiation

As confirmed in Section 4, no competing business information provider — Experian, Creditsafe, Bureau van Dijk, Moody's, Equifax, LexisNexis, or Verisk — offers a structured, continuously-updated Employment Tribunal risk signal at employer level. A partnership with AiLane gives D&B exclusive or first-mover access to a data dimension that competitors cannot replicate without building the equivalent estate from scratch — an investment of £150,000–£300,000 and 12–18 months of elapsed time.

6. Package Architecture

We offer four packages, each designed to integrate with D&B's existing data infrastructure. All packages deliver employer-level rollup intelligence only — no claimant personal data is included in any commercial output.

Package	Scope	Indicative annual value	Exclusivity	Delivery
1. SIC Sector Risk Index	Aggregate tribunal intelligence per SIC-4 sector (~615 sectors)	£120,000 – £250,000	Non-exclusive	Quarterly data feed (JSON/CSV)
2. Employer Risk Overlay	Per-employer tribunal profile for 78,699 UK employers (DUNS-matchable)	£1,180,000 – £1,970,000	Non-exclusive	Quarterly DUNS-keyed feed
3. Insurance Module	Actuarial-grade signals for EL/D&O/PI underwriting	£350,000 – £500,000	Non-exclusive	Quarterly feed + annual report
4. Exclusive Partnership	Full estate (Packages 1+2+3) with exclusivity and co-development	£2,500,000 – £3,500,000	12-month exclusive	Dedicated integration

Packages 1, 2 and 3 are available on a non-exclusive basis and may be licensed to multiple counterparties operating in complementary verticals. AiLane is in active discussions across the credit, insurance and enterprise risk sectors. Package 4 provides the only mechanism for a counterparty to secure exclusive access to the AiLane intelligence estate and prevent competitor licensing.

Packages are modular. They can be licensed individually or bundled with volume discounts (10% for Packages 1+2; 15% for Packages 1+2+3). Package 4 includes all component packages and carries a 12-month exclusivity window.

7. Package 1 — SIC Sector Tribunal Risk Index

7.1 Description

A structured dataset delivering tribunal intelligence aggregated to SIC-4 code level. Covers every active UK SIC-4 sector with tribunal activity. Designed for immediate integration with D&B's SIC-8 classification infrastructure.

7.2 Data Fields Per SIC-4 Sector

Field	Description	Type
sic_code	Standard Industrial Classification (4-digit)	String
sector_name	Sector description (ONS standard)	String
decisions_12m / 36m / lifetime	Total tribunal decisions in period	Integer
claimant_win_rate	% of decisions where claimant succeeded	Float
respondent_win_rate	% where respondent succeeded	Float
settlement_rate	% resolved by settlement/withdrawal	Float
mean_award_excl_zero	Mean financial award (non-zero only)	GBP
median_award	Median financial award	GBP
claim_type_distribution	% breakdown by claim type (unfair dismissal, discrimination, wages, etc.)	JSON object
statutory_breach_frequency	Breach rates per Act (ERA 1996, EqA 2010, TUPE 2006, WTR 1998, etc.)	JSON object
acei_category_distribution	12-category ACEI exposure profile for the sector	JSON object
judge_criticism_rate	% of decisions where the tribunal criticised the respondent	Float
representation_quality_index	Mean representation quality score for the sector	Float
yoy_claim_trend	Year-on-year change in claim volume	Float (%)

7.3 Integration Pathway

D&B already maps every UK company record to a SIC code. The SIC Sector Risk Index attaches directly to this mapping — every company in D&B's Data Cloud for which a UK SIC code exists inherits the sector-level tribunal risk signal. This provides immediate, broad coverage without requiring per-company matching.

7.4 Commercial Terms

Term	Detail
Annual licence fee	£120,000 – £250,000 (dependent on distribution scope)
Minimum term	12 months
Update frequency	Quarterly (aligned to HMCTS refresh)
Exclusivity	Non-exclusive — available to multiple counterparties across complementary verticals
Permitted use	Internal product enrichment, credit scoring, risk analytics, insurance underwriting
Attribution	"Contains public sector information licensed under the OGL v3.0" required on outputs

8. Package 2 — Employer Risk Overlay (DUNS-Matched)

8.1 Description

Per-employer tribunal intelligence for 78,699 unique UK employers with tribunal history. Delivered as a DUNS-matchable feed keyed to Companies House company number, enabling D&B to match against its DUNS registry and integrate directly into the Data Cloud.

This is the core product. It transforms D&B's UK company records from financially-scored to litigation-risk-scored — a dimension no competitor currently offers.

8.2 Data Fields Per Employer

Field	Description
companies_house_number	Companies House registered number (for DUNS matching)
employer_name	Registered company name
decisions_12m / 36m / lifetime	Tribunal decision count by period
outcome_distribution	Win/loss/settlement/withdrawal breakdown (%)
acei_profile	12-category ACEI distribution (employer's litigation fingerprint)
acei_primary_category	Dominant ACEI exposure category
mean_award	Mean financial award (with and without zero-award cases)
statutory_breach_types	Enumerated statutes cited against this employer
judge_criticism_rate	% of decisions where tribunal criticised this employer

Field	Description
representation_quality_score	Mean representation quality across all claims
first_decision_date	Date of earliest tribunal decision (recency/vintage signal)
latest_decision_date	Date of most recent tribunal decision
sic_code	Employer SIC code (cross-reference to Package 1 sector average)
sector_deviation	How this employer compares to its SIC sector average (above/below/in-line)

8.3 Value Proposition

The employer overlay creates immediate commercial value across multiple D&B product lines. The following scenarios illustrate the revenue mechanics:

Scenario	Assumption	Incremental annual revenue for D&B
Credit report enrichment	D&B UK sells ~1M credit reports/yr. Adding tribunal risk signal supports £3–£5 price increase on 30% of reports.	£900,000 – £1,500,000
Enterprise upsell	2% of ~11,000 UK customers upgrade by £500–£2,000/yr for tribunal-enriched tier	£110,000 – £440,000
Competitive win rate	5 additional enterprise deals/yr won through tribunal data differentiation, at £50,000 ACV	£250,000
Insurance vertical premium	50 insurance clients pay £5,000–£15,000/yr premium for underwriting-grade tribunal signals	£250,000 – £750,000
Retention uplift	0.5% reduction in at-risk churn on £122M UK base	£612,000

Conservative composite: D&B could realise £2.1M–£3.5M in incremental annual revenue from the employer overlay, against a licence cost of £1.18M–£1.97M. Payback period: under 12 months.

8.4 Commercial Terms

Term	Detail
Pricing model	Per employer record per annum
Non-exclusive rate	£15 per record/yr (78,699 records = £1,180,485/yr)
Exclusivity rate (12-month window)	£25 per record/yr (78,699 records = £1,967,475/yr)
Minimum term	24 months

Term	Detail
Update frequency	Quarterly
DUNS matching	Performed by D&B at D&B's cost (D&B holds the DUNS registry)
Exclusivity	Non-exclusive by default. Exclusivity available at the higher rate and prevents licensing of employer-level data to competing credit bureaus or business information providers.
Permitted use	Internal product enrichment, credit scoring, risk analytics, insurance underwriting, supply chain risk

9. Package 3 — Insurance & Underwriting Intelligence Module

9.1 Description

A premium actuarial-grade data product structured specifically for D&B's insurance vertical. D&B's insurance solutions already serve underwriters requiring business data for risk assessment. This module adds the employment litigation dimension.

Verisk and WTW's June 2025 collaboration to enhance commercial insurance pricing analytics confirms that the insurance sector is actively investing in new data inputs for underwriting models. AiLane's tribunal intelligence is a missing input to these models — and is available to insurance-focused counterparties on a non-exclusive basis.

9.2 Additional Fields (beyond Package 2)

Field	Description
claim_frequency_band	Categorical: 0, 1–2, 3–5, 6–10, 11+ (actuarial standard banding)
award_distribution_curve	Percentile distribution of financial awards by claim type
el_relevant_signals	Personal injury, psychiatric injury, injury-to-feelings awards (aggregated, not claimant-identified)
do_relevant_signals	Whistleblowing frequency, judge criticism of senior management, regulatory breach patterns
statutory_breach_taxonomy	Detailed Act-and-section-level breach mapping for actuarial modelling
annual_actuarial_summary	PDF report with trend analysis, sector benchmarks, and loss-cost projections

9.3 Commercial Terms

Term	Detail
Annual licence fee	£350,000 – £500,000 (includes all Package 2 data)

Term	Detail
Insurance-vertical exclusivity option	+25% premium for vertical-exclusive licence
Minimum term	24 months
Update frequency	Quarterly data feed + annual actuarial summary
Exclusivity	Non-exclusive by default. Vertical-exclusive option prevents licensing to competing insurance data providers (e.g. Verisk, LexisNexis Risk Solutions).
Permitted use	Actuarial modelling, underwriting, portfolio risk assessment, loss-cost projection

10. Package 4 — Exclusive Strategic Partnership

10.1 Description

The full AiLane employer-rollup estate — Packages 1, 2 and 3 combined — with strategic exclusivity and co-development rights.

This is the only package that prevents AiLane from licensing tribunal intelligence to other credit bureaus, business information providers, or enterprise risk platforms. Without Package 4, Packages 1–3 remain available to competing counterparties.

10.2 What Is Included Beyond Packages 1–3

12-month first-mover exclusivity — during the exclusivity window, no other credit bureau, data broker, or business information provider receives the AiLane employer-rollup dataset.

Custom enrichment requests — D&B may request specific analytical outputs (sector deep-dives, DUNS-matching optimisation, bespoke risk scores) subject to reasonable volume.

Co-development advisory — D&B participates in shaping the enrichment roadmap. AiLane retains sole control of the ACEI methodology.

Priority delivery and dedicated integration support.

Joint market positioning — AiLane intelligence credited within D&B products.

10.3 Commercial Terms

Term	Detail
Annual licence fee	£2,500,000 – £3,500,000
Revenue share	8–12% of identifiable incremental revenue D&B derives from tribunal-enriched products, payable quarterly in arrears

Term	Detail
Minimum term	36 months (3-year commitment)
Annual price escalator	5% or RPI, whichever is higher
Exclusivity window	12 months from first data delivery (renewable by mutual agreement)
Custom enrichment	Up to 4 bespoke analytical requests per quarter included
Termination	12-month notice period; data destruction within 30 days of termination

11. Commercial Summary

Package	Annual value	Exclusivity	Minimum term
1 — SIC Sector Risk Index	£120,000 – £250,000	Non-exclusive	12 months
2 — Employer Risk Overlay	£1,180,000 – £1,970,000	Non-exclusive (£15/rec) or 12-mo exclusive (£25/rec)	24 months
3 — Insurance Module	£350,000 – £500,000	Non-exclusive (vertical-exclusive option +25%)	24 months
4 — Exclusive Partnership	£2,500,000 – £3,500,000 + rev share	Full 12-month exclusivity	36 months

Bundle Discounts

Packages 1 + 2: 10% discount on combined annual fee

Packages 1 + 2 + 3: 15% discount on combined annual fee

Package 4 includes all component packages; no further discount applies

Pilot Option

AiLane offers a 90-day pilot on Package 1 (SIC Sector Risk Index) at a reduced fee of £25,000–£50,000. The pilot includes a subset of 50 SIC-4 sectors and full integration support. AiLane's AI-native delivery model enables pilot data delivery within days of NDA execution — not weeks or months. Pilot fees are credited against the first-year licence if the full package is executed within 60 days of pilot completion.

Non-Exclusive Availability

AiLane confirms that Packages 1, 2 and 3 are available on a non-exclusive basis to multiple counterparties. AiLane is in active engagement with participants across the credit bureau, insurance underwriting and enterprise risk sectors. Counterparties seeking to prevent competitor access to AiLane's intelligence estate should evaluate Package 4.

12. Value Realisation Framework

We recognise that the value of this data is realised through D&B's distribution, not through the data itself. The following KPIs are proposed for joint measurement during a pilot or first-year engagement:

KPI	Measurement	Suggested target
DUNS match rate	% of 78,699 employer records matched to D&B DUNS Numbers	85%+
Data quality score	D&B's internal DQS assessment of AiLane feed	90/100+
Product attach rate	% of UK F&R reports where tribunal signal is surfaced	40%+ (pilot); 60%+ (year 1)
User engagement	Click-through / view rate on tribunal signals in D&B products	15%+
Customer NPS (feature)	NPS from users exposed to tribunal risk feature	+30+
Attributable incremental revenue	Revenue directly traceable to tribunal-enriched upgrades or new wins	£500,000+ (year 1)

13. Data Governance & Compliance Architecture

All AiLane commercial products are designed within a compliance framework that has been internally audited against the requirements of UK GDPR, DPA 2018, the ET Rules of Procedure 2013, and the Open Government Licence v3.0.

13.1 What Is Not Included

No AiLane commercial product includes claimant personal data. The following fields are present in AiLane's internal estate but are systematically excluded from all commercial outputs:

- Claimant names, addresses, and direct identifiers
- Article 9 special-category data (health conditions, protected characteristics linked to named individuals)
- Records subject to Employment Tribunal Rule 50 restricted reporting orders
- Records subject to Sexual Offences (Amendment) Act 1992 anonymity provisions

13.2 Contractual Architecture

Any commercial engagement will be governed by three parallel agreements, negotiated together and executed simultaneously:

Master Data Licence Agreement (MDLA) — bespoke to this partnership, not a counterparty template. Covers permitted purpose, non-derivation, onward transfer prohibition, attribution, audit rights, retention, and termination.

Data Processing Agreement (DPA) — UK GDPR Article 28 compliant where applicable; controller-to-controller terms where independent controllership applies.

Data Sharing Agreement (DSA) — ICO Data Sharing Code of Practice (2021, statutory code) compliant. Covers purposes, legal bases, categories, security, retention, data-subject rights, and termination.

13.3 Key Protections

Protection	Purpose
Permitted Purpose restriction	Data used only for defined purposes; no silent repurposing
Non-derivation covenant	Counterparty may not reverse-engineer or replicate AiLane's enrichment or ACEI taxonomy
No onward transfer	Data may not be sublicensed or resold without AiLane's written consent
Suppression feed	Daily feed of data-subject erasure requests; counterparty has 72-hour deletion SLA
OGL attribution	All outputs must carry Open Government Licence v3.0 attribution
Audit right	AiLane reserves the right to audit counterparty compliance on notice
Retention cap	Counterparty must delete all data within 30 days of contract termination
Termination for regulatory change	AiLane may terminate on notice if legal/regulatory change materially alters the lawful basis for processing

These protections are consistent with market standards for institutional data partnerships. They mirror the guardrails that D&B itself imposes on its own customers through its Acceptable Use Policy and Data Processing Addendum.

14. Engagement Process — 90-Day Accelerated Pathway

AiLane operates an AI-native data production model. Unlike traditional data suppliers who require months of engineering to produce deliverables post-contract, AiLane can generate pilot data cuts in days and production feeds in weeks. The engagement process reflects this capability.

14.1 Three-Phase Timeline

Phase	Timeline	Activity	Deliverable
1 —	Weeks 1–	Senior-level meeting (VP Strategic Data Partnerships	Mutual NDA; pilot

Phase	Timeline	Activity	Deliverable
Evaluation	4	or CDO). Mutual NDA executed. AiLane delivers pilot dataset (Package 1: 50 SIC-4 sectors) within days of NDA execution. D&B data team evaluates sample output, assesses DUNS matching feasibility, reviews data quality.	dataset delivered; technical evaluation report
2 — Commercial	Weeks 5–8	Package selection and pricing agreement based on pilot results. MDLA/DPA/DSA negotiation (with external counsel). Commercial terms finalised. D&B internal approvals secured.	Signed MDLA, DPA, DSA; confirmed package selection
3 — Production	Weeks 9–12	Full data feed delivered in agreed format (JSON/CSV/DUNS-keyed). D&B production integration. Value measurement commences per KPI framework (§12). Customer-facing feature launch.	Live product with tribunal intelligence; KPI baseline established

14.2 Why 90 Days Is Achievable

Traditional data partnerships take 9–18 months from first meeting to production. The bottleneck is typically the supplier's engineering timeline — building ETL pipelines, standing up APIs, hiring data engineers, running QA cycles. AiLane eliminates this bottleneck entirely:

Traditional supplier	AiLane
Pilot delivery: 8–12 weeks post-NDA	Pilot delivery: 3–5 days post-NDA
Bespoke data cuts: new SOW per request	Bespoke data cuts: near-zero marginal cost
Production feed build: 3–6 months	Production feed: available within weeks of contract
Change requests: engineering sprints	Change requests: prompt engineering, delivered in hours
Quality improves with headcount	Quality improves with model capability (continuous, no capex)

The remaining timeline constraint is D&B's internal procurement and legal review cycle. AiLane is ready to deliver at the speed D&B can evaluate and approve.

15. About Our Data Sources

AiLane's intelligence estate is built from publicly available Employment Tribunal decisions published by His Majesty's Courts and Tribunals Service (HMCTS) via gov.uk. These decisions are Crown copyright material, made available under the Open Government Licence v3.0.

Under OGL v3.0, licensees may copy, publish, distribute, adapt and exploit commercially. The licence requires attribution to the source. AiLane's products carry the required attribution, and this obligation is passed through to commercial counterparties.

AiLane's enrichment — the ACEI classification, the 171-column analytical schema, the statistical aggregations, and the employer-level profiles — is proprietary to AI Lane Ltd and protected by sui generis database right under the Copyright and Rights in Databases Regulations 1997 (SI 1997/3032). The enrichment is not a repackaging of public data; it is a substantive intellectual investment in verification, classification and analytical presentation.

Appendix A — ACEI Classification Taxonomy Overview

The ACEI (Ailane Compliance Exposure Index) assigns every tribunal decision to one or more of 12 exposure categories. Each employer's ACEI profile shows the distribution of their tribunal history across these categories — a litigation fingerprint.

Category	Scope
1. Contractual Compliance	Terms and conditions of employment, notice periods, contractual entitlements
2. Dismissal Practices	Procedural fairness, ACAS Code adherence, reasonableness of dismissal
3. Discrimination & Equal Treatment	Protected characteristics under Equality Act 2010, direct and indirect discrimination, harassment, victimisation
4. Working Time & Leave	Working Time Regulations 1998 compliance, holiday pay, rest breaks
5. Pay & Remuneration	Wages Act deductions, National Minimum Wage, equal pay, bonus disputes
6. Redundancy & Restructuring	Selection criteria, consultation obligations, protective awards, TUPE transfers
7. Whistleblowing & Detriment	Protected disclosures under ERA 1996 Part IVA, automatic unfair dismissal
8. Health & Safety	Detriment for H&S activities, unsafe working conditions, personal injury
9. Family & Carer Rights	Maternity, paternity, adoption, shared parental leave, flexible working
10. Data & Privacy	Workplace surveillance, data subject access, privacy violations
11. Trade Union & Collective	Union membership detriment, collective consultation, industrial action
12. Regulatory & Statutory	Cross-cutting statutory obligations, regulatory enforcement, compliance failures

Full ACEI methodology, scoring algorithms and validation data are available under NDA to qualified counterparties.

Appendix B — Sample SIC Sector Output

The following is an illustrative example of the SIC Sector Risk Index output for a single sector. Actual data would be provided during the technical evaluation phase.

Field	Value
sic_code	56101
sector_name	Licensed restaurants
decisions_12m	387
decisions_36m	1,142
decisions_lifetime	3,891
claimant_win_rate	38.7%
respondent_win_rate	24.1%
settlement_rate	37.2%
mean_award_excl_zero	£12,847
median_award	£6,203
claim_type_distribution	{"unfair_dismissal": 0.42, "wages": 0.31, "discrimination": 0.14, "working_time": 0.08, "other": 0.05}
acei_primary_category	2. Dismissal Practices (42%)
judge_criticism_rate	28.3%
representation_quality_index	0.61
yoy_claim_trend	+7.2%

Note: the figures above are illustrative. Actual production data is available for evaluation upon execution of an NDA.
