Classification: Confidential — Pre-Contractual

Cover note

Dear Strategic Data Partnerships team — and Josh,

Following Josh Tang's reply of 17 April 2026 confirming D&B's interest in continuing the conversation around partnership proposals at six figures or above, this roadmap has been prepared to support routing the opportunity to the appropriate team within Dun & Bradstreet UK & Ireland.

It is the operational companion to AI Lane's Commercial Proposal (AILANE-PROP-DMSP-001 v2, April 2026), focusing on how the engagement is structured, what each phase delivers, where Dun & Bradstreet's teams will be engaged, and how AI Lane operates institutionally throughout. Where the proposal answered "what is the commercial opportunity," this document answers "what does the engagement actually look like in practice."

AI Lane's institutional posture is asynchronous-by-default. The pathway described in this document does not require a single meeting at any phase. All bilateral milestones are signable via DocuSign or equivalent. Routine queries are handled by AI Lane's intelligence assistant in the counterparty deal-room. Director engagement is reserved for Director-level decisions. This is by design, and is intended to make the engagement compatible with the velocity at which institutional data partnerships actually move when they're working well.

The roadmap proposes pilot-led entry at the six-figure threshold Josh identified, with a clear staircase to Package 2. No assumptions are made about D&B's preferred package; multiple paths are presented in §3 below. Whichever path D&B's Strategic Data Partnerships team prefers, this document describes how it would unfold.

AI Lane is grateful for the introduction Josh has provided and looks forward to engaging with the team.

Mark Lane

Director, AI Lane Limited

§1 What this document is

This is the operational roadmap that complements AI Lane's commercial proposal. It is structured to be readable end-to-end in 15 minutes by a Strategic Data Partnerships lead, and structured for forwarding to colleagues in legal, DPO, procurement, and technical integration without requiring a follow-up call to interpret.

The document presumes prior familiarity with AILANE-PROP-DMSP-001 v2 (the commercial proposal) — package architecture, pricing, value model, KPI framework, governance & compliance architecture. Where this roadmap references commercial figures, the canonical source is the proposal.

The document is grouped in four parts: §§2-3 cover commercial entry options and the engagement pathway visually; §§4-7 cover institutional posture, document set, gate framework, and sample-tier discipline; §§8-11 cover pilot architecture, data delivery, money flow, and renewal continuity; §12 sets out the three asynchronous next-step paths available to D&B's Strategic Data Partnerships team.

§2 Commercial entry options

The proposal (AILANE-PROP-DMSP-001 v2 §11) sets out four packages and a 90-day pilot path. This roadmap presents four entry options consistent with that architecture, organised by commercial commitment shape rather than package number. Each option is presented with full transparency on pilot fee mechanics (credited against Year 1 licence per proposal §11), term length, and lock-in posture.

Path	Pilot fee	Year 1 licence	3-year cumulative	Lock-in
A — Pilot only	£25K-£50K	n/a	n/a (pilot may convert)	60 days from pilot fee receipt
B — Pilot → Package 1	£25K-£50K (credited)	£120K-£250K	~£378K-£788K (5% pa indexation)	Pilot 60d + Package 1 12-month term
C — Pilot → Package 2	£25K-£50K (credited)	£1.18M-£1.97M	~£3.72M-£6.21M (5% pa)	Pilot 60d + Package 2 24-month term
D — Stepped Pkg 1 → Pkg 2	£25K-£50K (credited)	Pkg 1 Year 1 → Pkg 2 Year 2 (10% bundle)	Tailored to D&B cadence	Continuous via single CLID

AI Lane's recommended entry — based on D&B's stated commitment posture — is Path B or D. Path B is the cleanest single-package six-figure commitment; Path D is the staircase architecture that the proposal §14.1 90-day accelerated pathway is designed for. Path A (pilot only) is offered

for completeness; Path C (direct Package 2) is available for D&B's selection if preferred but is not the lowest-risk entry point.

2.1 Bespoke and counter-proposal pathways

The four packages set out below are starting points. AI Lane recognises that institutional counterparty engagements at this scale frequently operate outside fixed menus — D&B may wish to compose a bespoke configuration that combines selected data fields, specific refresh cadences, sector-specific scopes, vertical-exclusive overlays, or other variations not captured by the four standard packages. AI Lane supports this through a Counterparty Co-Creation surface within the deal-room.

D&B's nominated contacts can compose a draft configuration, Eileen evaluates it against the framework in real time (gating implications, commercial profile, constitutional alignment, delivery feasibility, comparable benchmarks), and the resulting bespoke proposal enters Director review through the same governance pathway as standard packages. Counter-proposals to either standard or bespoke packages are welcomed at any phase via the deal-room. The framework is the constraint; the package shape is open.

This is operational reality, not aspiration. AI Lane's data estate exposes substantial field-level flexibility — refresh cadences, sector and geographic scopes, exclusivity terms, delivery channel preferences, and bundle compositions — all of which can be combined within the constitutional and gate framework. The Co-Creation surface comes online progressively through the deal-room implementation phasing; the bespoke pathway is available from Phase B onwards.

2.2 Package architecture (proposal §11 reference)

For convenience, the four packages from the proposal are reproduced below with their commercial summary. Full package detail is in the proposal §§7-10.

Package	Annual value	Term	Exclusivity
1 — SIC Sector Risk Index	£120K-£250K	12 months	Non-exclusive
2 — Employer Risk Overlay (DUNS-matched)	£1.18M-£1.97M	24 months	Non-exclusive (default) or 12-month exclusive at premium
3 — Insurance & Underwriting Module	£350K-£500K	24 months	Non-exclusive (vertical-exclusive option +25%)
4 — Exclusive Strategic Partnership	£2.5M-£3.5M + 8-12% rev share	36 months	Full 12-month first-mover exclusivity

Bundle discounts are available per proposal §11: Packages 1+2 attract a 10% combined discount; Packages 1+2+3 attract 15%. Package 4 includes all component packages with no further discount.

§3 The engagement pathway

The diagram on the following page shows the six phases of the engagement — from this roadmap's delivery (Day 0) through to operational steady state (~Day 105 conservative envelope, ~Day 35 earliest plausible if both parties move fast). Four lanes show what AI Lane is doing, what your team is doing, the joint commercial milestones, and the status of each phase.

The pathway operates under a parallel-progress principle: where D&B is unblocked, D&B advances; where AI Lane is unblocked, AI Lane advances. Independent tracks never wait for each other. AI Lane commits to a 10 business-day response SLA for any decision requiring Director sign-off — this is the conservative envelope; in practice most Director-side decisions clear within 1-3 business days, but the SLA is the disclosed commitment.

No phase requires a meeting. All bilateral milestones — NDA, Pilot SOW, MCA, MDLA, DPA, DSA — are signable asynchronously via DocuSign or equivalent.

This roadmap is supported by Eileen, AI Lane's intelligence agent. Eileen sits within the counterparty deal-room described in §9 and is configured specifically for the Dun & Bradstreet engagement context. Her role is to answer operational questions about the engagement at any depth — package architecture, gate framework, data fields available within each tier, pilot mechanics, KPI definitions, payment cadences, document set composition, renewal cascade timing — in plain language and on D&B's schedule. Eileen is intentionally available, intentionally responsive, and intentionally engaged with the conversation. The deal-room is not a static workspace with a chatbot bolted on; it is a workspace where Eileen is a substantive engagement partner.

Eileen is governed by AI Lane's constitutional framework (ACEI v1.0, RRI v1.0, CCI v1.0, and AILANE-SPEC-PLUGIN-001 Article XIV). What this means in practice: Eileen provides intelligence, not legal advice. She will explain how a gate works, but will not opine on whether D&B's specific posture meets it — that is for D&B's counsel. She will explain what a package contains and what its commercial profile looks like, but she does not commit AI Lane to terms; commercial commitments require Director sign-off through the framework described in §10. Within those boundaries, Eileen is built to be a substantive engagement partner, not a chatbot. Voice integration (audio response, screen-aware conversation, ability to pause and discuss any visual artefact in the deal-room with Eileen live) is on the development roadmap and is targeted for availability before D&B reaches Phase E.

AI Lane Engagement Pathway — Phases and Joint Milestones

Estimated 5-15 weeks from roadmap delivery to operational state · No meeting required at any phase · Companion to AILANE-ROADMAP-DNB-001

PARALLEL-PROGRESS PRINCIPLE

Where D&B is unblocked, D&B advances. Where AI Lane is unblocked, AI Lane advances. Independent tracks NEVER wait for each other. AI Lane response SLA = 10 business days for any decision requiring Director sign-off.

	PHASE A Roadmap → NDA prep Earliest: 2-5 days Envelope: Up to 14 days	PHASE B NDA Executed → Pilot SOW Earliest: 2-5 days Envelope: Up to 14 days	PHASE C Pilot delivery & validation Earliest: Days for delivery Envelope: Up to 90 days SOW window	PHASE D Legal review + Commercial Earliest: 10-14 days Envelope: Up to 35 days	PHASE E MCA + Year 1 Commencement Earliest: 1-3 days Envelope: Up to 14 days	PHASE F Operational Steady State Earliest: — Envelope: Continuous
AI Lane delivery Response SLA: 10 business days committed	Roadmap delivered; awaits routing acknowledgement and confirmation of nominated D&B contacts (legal lead, DPO, commercial lead)	AI Lane signs NDA on D&B template OR offers Ailane mutual-NDA template; pilot SOW drafted and presented for D&B review	Pilot endpoint provisioned (read-only, IP-allowlisted) per Pilot SOW. Pilot data cut delivered within DAYS of pilot fee receipt — proposal §14.1 commitment	Counterparty Lifecycle Identifier (CLID) issued; full Legal & Audit Pack (LAP) delivered for D&B counsel review; per-CLID DPIA addendum prepared	Production endpoint activates under live MCA; first delivery batch released as full-fidelity sample under entitlement; verification window (24 hours)	Quarterly delivery cadence; daily incremental deltas; suppression feed always-on per UK GDPR Article 17; quarterly performance summary; renewal cascade opens at T-180
Your team Legal · DPO · Commercial · Procurement (parallel)	Strategic Data Partnerships team reviews roadmap; nominates legal lead, DPO, commercial lead, technical integration lead	D&B counsel reviews NDA; commercial lead aligns on package selection (Package 1 entry, Package 2 staircase visible); contracting entity confirmed	D&B technical team integrates pilot data into validation environment; data quality assessment; DUNS bulk-match run against pilot feed; validation report	D&B legal LAP review (proposal §13.2 four-instrument MDLA + DPA + DSA + supports); DPO Article 28/26 controllership analysis; procurement onboarding; internal sign-off — all running in parallel	D&B counsel signs MCA, MDLA, DPA, DSA simultaneously per proposal §13.2; D&B accounts payable receives Year 1 invoice; standard institutional payment terms	D&B commercial lead in monthly relationship-management cadence; quarterly KPI review per proposal §12; renewal conversation opens at T-180; expansion conversations within same CLID
Joint commercial Bilateral milestones · async-signable	Asynchronous contact only — no meeting required. Routine queries answered via deal-room (or partnerships@ailane.ai). Eileen on hand for operational questions throughout	**MUTUAL NDA EXECUTED via** DocuSign or equivalent; Pilot SOW signed; pilot fee invoiced; 60-day exclusive-Package-4 negotiation lock-in commences on pilot fee receipt	Joint pilot success criteria reviewed weekly between technical leads; joint DUNS-match validation against §12 KPI target (85%+); package selection conversation	MDLA · DPA · DSA negotiated together per proposal §13.2; package selection finalised; bundle discount applied if Pkg 1+2 (10%) or Pkg 1+2+3 (15%) per proposal §11	**MCA SIGNED; full LAE** cycle closed; counterparty relationship enters operational state; pilot fee credited against Year 1 licence per proposal §11	Operational continuity; expansion conversations within same CLID (variation rather than new MCA); no relationship cliff edge — renewal cascade fully automated
Status / progress What is in flight vs awaiting next decision	Awaiting D&B routing of roadmap to Strategic Data Partnerships team. AI Lane preparation in parallel: pilot SOW drafted, Eileen counterparty context configured, deal-room workspace provisioned	Awaiting NDA execution. AI Lane preparation in parallel: pilot endpoint provisioning standby, LAP final review, D&B nominated contacts onboarded to deal-room	Pilot in flight; D&B selects validation depth within 90-day SOW window. AI Lane prepares LAP for Phase D release; per-CLID DPIA addendum drafted	Legal & commercial reviews in flight (BOTH parties' counsel running in parallel). AI Lane prepares production endpoint; CLID active in deal-room	All gates closed; production endpoint live. 24-hour verification window for D&B technical integration teams to confirm receipt and integrity	Operational state. Telemetry monitored continuously; quarterly reconciliation; T-180 renewal cascade auto-triggers at end of Year 1 to ensure no relationship cliff edge

ZERO MEETINGS REQUIRED. All bilateral milestones executed asynchronously: NDA, Pilot SOW, MCA, MDLA, DPA, DSA all signable via DocuSign or equivalent.
Routine queries handled by Eileen, AI Lane's intelligence agent, in the counterparty deal-room. Director engagement reserved for Director-level decisions only. Earliest plausible Day 0 to Operational: ~5 weeks.

Figure 1. AI Lane Engagement Pathway — Phases A through F. Four lanes (AI Lane delivery / Your team / Joint commercial / Status). Six phases. Parallel-progress operating principle. AI Lane response SLA 10 business days committed. No meeting required at any phase.

§4 Where automation sits

AI Lane is an AI-native data partner. The proposal §14.1 commits to delivering pilot data "within days of NDA execution" — this is operationally real because the data already exists in AI Lane's intelligence estate; pilot delivery is a curation and provisioning task, not a build task.

In practice, the engagement looks like this: most steps run automatically. Document generation, gate status tracking, telemetry capture, payment reconciliation, suppression-feed propagation, KPI computation, renewal-pack generation — all automated. Where Director judgement is genuinely required (final ratification of bespoke MCA terms, response to non-standard procurement positions, decisions on package staircase pacing) AI Lane responds to a 10 business-day SLA.

This is institutionally important to flag because it shapes the engagement velocity. If D&B's Strategic Data Partnerships team has experienced data partnerships that depend on weekly calls, periodic in-person workshops, or standing steering-committee cadence, the AI Lane engagement

model is intentionally different. The discipline of asynchronous-by-default protects both parties: D&B's team is not pulled into meetings to maintain progress; AI Lane is not bottlenecked by Director availability for routine matters; the engagement runs at the velocity of decisions, not the velocity of calendars.

§5 Documents you will receive

Each phase of the engagement releases a defined set of documents to your team. The release is staged — documents become available as the prior phase's commitments are met. The full Legal & Audit Pack (LAP) is large; the staged release ensures your legal, DPO, and procurement teams receive what they need at the point they need it, not all at once.

Document	Phase released	Purpose
Mutual NDA	Phase A → B trigger	Confidential information framework
Pilot SOW	Phase B	Pilot scope, fee, lock-in, success criteria
Pilot dataset (50 SIC-4 sectors)	Phase C	Per Pilot SOW — 'within days of NDA execution' per proposal §14.1
LAP Overview	Phase C	Summary of Legal & Audit Pack composition
Per-CLID DPIA Addendum	Phase D	UK GDPR Article 35 data protection impact assessment
LIA / ROPA / APD / Privacy Notice	Phase D	Lawful basis, processing record, accountability, transparency
OGL v3.0 attribution framework	Phase D	Per proposal §13.3 — required on all outputs
ICO Registration certificate (00013389720)	Phase D	Statutory data controller registration evidence
MCA + MDLA + DPA + DSA	Phase D → E	Four-instrument bundle per proposal §13.2 — negotiated and executed simultaneously

All documents are delivered as PDF and DOCX through the counterparty deal-room (§9) for permanent access by D&B's nominated team members. Document provenance, version, and effective date are stamped on every artefact. AI Lane maintains a complete document register; D&B's procurement team can request the authorised set list at any point for internal audit purposes.

§6 Gate framework activated for D&B

AI Lane operates a ten-gate Legal & Audit Engagement (LAE) cycle that protects all commercial counterparty engagements. For Package 1 or Package 2 (the recommended D&B entry options),

seven gates activate; three are explicitly omitted because the relevant data categories are not present in commercial outputs.

Gate	Subject	Activated for D&B?
G3	CLID issuance	**Yes — at NDA execution**
G4	Privacy & lawful basis verification	**Yes — DPIA addendum + LIA**
G5	Special Category Data (Article 9)	OMITTED — no Article 9 data in commercial outputs (proposal §13.1)
G6	Children's data	OMITTED — no children's data in employer-rollup intelligence
G7	Family I tribunal-anonymity records	OMITTED — no Family I respondents in commercial outputs
G8	OGL v3.0 attribution	**Yes — required on all outputs (proposal §13.3)**
G9	Data sharing arrangement	**Yes — DPA + DSA per proposal §13.2**
G10	Telemetry verification	**Yes — first delivery batch verification window**

Each activated gate has documented evidence requirements. The full gate evidence pack is available behind NDA on Phase B execution. The gates are not procedural friction — they are the institutional discipline that makes the partnership defensible to ICO, FCA, audit, and any future regulatory inquiry. Both parties benefit from the rigour.

§7 Sample tier discipline

AI Lane operates a three-tier sample architecture deliberately. Each sample tier corresponds to a defined commercial commitment level. This is by design, not friction — it ensures that data of progressively higher commercial value is exposed only to counterparties whose commitment matches that value.

- **Tier 1 — Public sample.** Available without commitment. The proposal Appendix B already in your hands contains a fully-worked sample SIC sector output. This is the public-facing demonstration of AI Lane's enrichment depth and methodology.
- **Tier 2 — Pilot sample.** Available under Pilot SOW (Phase B). 50 SIC-4 sectors at full Package 1 enrichment depth. Bound by mutual NDA. Time-limited to the 90-day SOW window per proposal §11. Pilot fee credited against Year 1 licence on Package conversion within 60 days of pilot completion.
- **Tier 3 — Full-fidelity.** Available under MCA (Phase E). The complete data block at the package entitlement level. Quarterly batch + daily incremental + suppression feed + telemetry visibility. Reconciliation reports issued quarterly per §10 below.

No counterparty receives Tier 3 data without a signed MCA. No counterparty receives Tier 2 without a signed Pilot SOW and pilot fee receipt. This discipline protects both AI Lane's data asset and the integrity of the engagement model — the value of the data is preserved by the discipline.

§8 Pilot phase architecture

The 90-day pilot per proposal §11 is the recommended entry path for institutional counterparties. Pilot fee £25,000-£50,000 (mid-bound £37,500). 50 SIC-4 sectors at full Package 1 enrichment depth. Bound by mutual NDA. Pilot fee credited against Year 1 licence if Package is executed within 60 days of pilot completion.

8.1 Joint DUNS-match validation

The proposal §12 KPI framework targets 85%+ DUNS match rate against the 78,699 employer records. AI Lane proposes that this match-rate validation is conducted as a joint pilot deliverable rather than a Year 1 production KPI.

Specifically: AI Lane delivers the pilot feed in Companies House-keyed format. D&B runs bulk DUNS-match against the feed using D&B's own infrastructure ("DUNS matching: Performed by D&B at D&B's cost (D&B holds the DUNS registry)" — proposal §8.4). Match rate is reported back jointly. Where rate falls below the 85% target, joint root-cause analysis surfaces the cause (data quality, sector scope, sole-trader respondents, or other patterns) and AI Lane addresses what is addressable before Year 1 commencement.

This reframes the §12 KPI from a Year 1 production risk into a pilot phase deliverable. Both parties enter Year 1 production with a verified match-rate, not an aspirational target. AI Lane's 78,699-employer feed is verified-fit-for-purpose against D&B's actual DUNS registry before any Year 1 commitment commences.

8.2 Pilot lock-in

On execution of the Pilot SOW and receipt of the pilot fee, AI Lane Limited will not enter exclusive Package 4 negotiations with any other counterparty for a period of 60 days. AI Lane retains the right to engage other counterparties on non-exclusive Packages 1, 2, and 3 during the pilot period, consistent with the non-exclusive availability statement in proposal §11.

This protection ensures that D&B's pilot fee and any internal legal cost incurred during pilot review are not exposed to the risk of AI Lane signing an exclusive Package 4 with a competing counterparty during D&B's evaluation window. The 60-day lock-in is operative through DocuSign timestamps; either party can verify the lock-in status from the deal-room at any time.

§9 Data delivery architecture

AI Lane data delivery is not file transfer. Institutional data partnerships at this scale operate as continuous entitled access through controlled channels. AI Lane offers two delivery channels; D&B selects the preferred channel at MCA negotiation.

9.1 Two delivery channels

- **Channel 1 — REST API.** D&B authenticates with API key + IP allowlist. Endpoint serves quarterly batch + daily incremental delta data blocks per package entitlement. Standard institutional B2B pattern. Suitable for D&B's existing integration toolkit.

- **Channel 2 — Snowflake Secure Data Share.** AI Lane creates a per-CLID Snowflake share against the curated materialized view. D&B attaches the share at D&B's Snowflake account and queries natively. Zero data movement; D&B reads directly from the share. Modern best practice for Snowflake-resident data partnerships.

Both channels enforce the same entitlement model: per-CLID record specifies what data blocks are permitted, what date window, what rate limit, what Annual Allowance, what IP allowlist (REST) or Snowflake account ID (Snowflake Share). Withdrawal of entitlement is immediate; either party can verify entitlement state at any time.

9.2 Three-layer verification

Every data delivery carries integrity guarantees at three layers.

- **Technical.** Every batch carries SHA-256 hash and signed manifest with batch ID, sequence number, row count, column schema version. D&B verifies integrity at receipt; mismatches trigger automatic re-delivery.
- **Entitlement.** Per-request orchestration logs: CLID, timestamp, requesting IP, data block requested, rate-limit budget consumed, response row and byte count. Audit trail for D&B's compliance review and reconciliation source.
- **Reconciliation.** Quarterly reconciliation report from telemetry — what was delivered, when, against which entitlement window. D&B's ingestion telemetry produces the mirror. Both reports exchanged via the deal-room. Discrepancies surface to both parties; root-cause analysis happens jointly.

9.3 Counterparty deal-room

The engagement is supported by a private counterparty workspace (the deal-room) accessible at ailane.ai/partners/dnb-2026/. The deal-room is private — not in the public sitemap, not indexed — accessible to nominated D&B contacts via authenticated link. It progressively becomes more capable through the engagement: pre-engagement, it hosts this roadmap, the proposal, the LAP overview, the gate status board; post-NDA, it hosts the document set anchored to the CLID; post-MCA, it becomes the operational dashboard with live delivery telemetry, Annual Allowance utilisation, KPI tracking, payment status, and reconciliation reports. The deal-room is the shared visibility surface for both parties throughout the relationship lifecycle.

Engagement with Eileen in the deal-room operates conversationally. D&B's nominated contacts can ask anything from "what does Gate G9 require" to "how would a DUNS-matched Package 2 with vertical-exclusive insurance overlay shape commercially" and receive a substantive structured answer with full reference to the underlying framework. Bespoke configurations composed in the Co-Creation surface (§2.1) are evaluated by Eileen in real time against the constitutional framework, gate implications, and delivery feasibility. Voice and screen-aware conversation are on the development roadmap and will be available before D&B reaches Phase E. Until voice is live, Eileen operates in text — but with the conversational density of a real engagement partner, not the abruptness of a query bot.

§10 Money flow and protections

10.1 Payment cadence

AI Lane proposes quarterly payment cadence as the operational default for licence fees, consistent with institutional B2B data partnership norms. For Package 2 mid-bound (£1.575M) this is £393,750 per quarter via UK Faster Payments. For Package 1 mid-bound (£185,000) this is £46,250 per quarter.

D&B's procurement team may prefer alternative cadences (annual lump sum, semi-annual, monthly recurring) and alternative payment rails (CHAPS, BACS Direct Debit, SWIFT for cross-border if D&B contracts via D&B Holdings Inc. rather than D&B UK Limited). All such preferences are accommodated; the only requirement is that payment terms are specified in the MCA schedule.

Pilot fee is invoiced separately on Pilot SOW execution and is payable within 30 days of invoice receipt (or such other terms as D&B procurement specifies). Pilot fee is credited against the first Year 1 quarterly invoice if a Package is executed within 60 days of pilot completion, per proposal §11.

10.2 Refund and protection mechanics

AI Lane's commercial protection posture is documented in the Pilot SOW and the MCA. Three protection clauses materially affect D&B's exposure:

- **Pilot fee refund on Ailane withdrawal.** If AI Lane elects not to proceed to MCA after pilot completion, the pilot fee is fully refunded plus a goodwill credit of 50% of pilot fee value applicable to any future engagement within a 12-month window. This protects D&B's internal legal cost incurred during pilot review.
- **Pilot fee non-refundable on counterparty withdrawal.** If D&B elects not to proceed, pilot fee is non-refundable per standard B2B norms but may be applied as 100% credit toward any future AI Lane engagement within a 12-month window. This is symmetric protection: neither party loses internal investment.
- **Termination retention cap.** Per proposal §13.3, on contract termination D&B has a 30-day window to delete all downstream data copies; AI Lane revokes entitlement immediately. Suppression feed remains active for 30 days beyond termination to honour data-subject rights regardless of commercial state.

10.3 Time mechanics

No deal expires unilaterally. At any point during the engagement, D&B may request a timeline extension via the deal-room or via partnerships@ailane.ai. Extensions are granted with a confirmed new schedule. The lock-in clock pauses during agreed extension periods so that D&B's protection is preserved during requested delays. AI Lane recognises that institutional procurement and legal review cycles are often unpredictable; the engagement model is built to accommodate this without commercial penalty.

§11 Renewal and continuity

AI Lane operates a renewal cascade designed to ensure no relationship cliff edge. The cascade triggers at T-180 days before MCA expiry and progresses through T-120, T-90, T-60, T-30, and T-0 with progressively more concrete deliverables: at T-180 the renewal notification opens; at T-120 the renewal pack auto-generates from operational telemetry; at T-90 commercial terms for renewal are issued; at T-60 the renewal MCA enters legal review; at T-30 the renewal Year 1 invoice is issued; at T-0 the renewal commences seamlessly with no gap in delivery.

All cascade events are visible in the deal-room. D&B's Strategic Data Partnerships team and procurement team see the same timeline AI Lane sees. Either party can request an off-cycle renewal conversation; the cascade does not foreclose flexibility, it simply ensures default behaviour is continuity, not lapse.

Variation conversations within the same MCA term (Package upgrade, Annual Allowance increase, Burst Factor adjustment, additional vertical) operate similarly: requested via the deal-room, processed through a defined variation flow, executed as MCA schedule amendment rather than full MCA renegotiation. The CLID anchors continuity across variations.

§12 What happens next

Three asynchronous next-step paths are available to D&B's Strategic Data Partnerships team. Each is independently selectable; none requires a meeting; none requires a phone call.

Path A — NDA-first

D&B counsel reviews the AI Lane mutual-NDA template (or proposes D&B's preferred template). NDA is executed asynchronously via DocuSign or equivalent. On execution, the engagement enters Phase B and the Pilot SOW is delivered through the deal-room within 5 business days (1-day realistic). This is the standard path for counterparties who want to see full operational detail before commercial commitment.

Path B — Pilot SOW direct

D&B requests the Pilot SOW directly. AI Lane delivers the Pilot SOW with embedded NDA terms within 5 business days. D&B counsel reviews the bundled instrument; signature on the Pilot SOW executes both NDA and Pilot SOW simultaneously. Pilot fee invoiced; pilot delivery commences on fee receipt within 1-2 hours per proposal §14.1. This is the fastest path to operational data and is the path AI Lane recommends for D&B's commitment posture.

Path C — Q&A first via deal-room

D&B's Strategic Data Partnerships team has questions before commercial commitment. Questions can be sent via the deal-room (the primary channel — Eileen handles routine operational queries on D&B's schedule, with the conversational density described in §9.3). The deal-room workspace is provisioned for D&B's nominated contacts on request — first request triggers workspace provisioning; access credentials are sent to nominated contacts via secure

link. There is no commitment threshold for Path C — questions can be asked at any depth without obligating either party. Substantive commercial or legal questions surface to the Director through AI Lane's internal counterparty management dashboard, not through email channels. This ensures questions reach the Director's attention on a structured cadence rather than via inbox chasing — a direct extension of AI Lane's asynchronous-by-default operating principle.

Email is available as a fallback channel for D&B contacts not yet onboarded to the deal-room (or for legal-and-compliance correspondence requiring formal email trail) at partnerships@ailane.ai. AI Lane's preference is the deal-room as primary, however, because the deal-room provides Eileen, full document context, gate status visibility, and operational continuity — none of which a flat email exchange offers. To request the deal-room workspace, request the Pilot SOW, or open NDA review, please reply to Josh Tang in the first instance, or contact partnerships@ailane.ai directly. AI Lane will acknowledge within 1 business day and confirm next deliverables. No calendar scheduling is required at any phase.

§13 About this document

This roadmap is the operational companion to AILANE-PROP-DMSP-001 v2 (April 2026). Where this roadmap and the proposal differ, the proposal is the canonical commercial source and this document is the canonical operational source. Where commercial figures appear in this document, they are reproduced from the proposal §11 commercial summary; the proposal remains the authority on all pricing, exclusivity, and term commitments.

This document is shared confidentially with Dun & Bradstreet UK & Ireland Strategic Data Partnerships team and authorised colleagues. It is not for further distribution beyond Dun & Bradstreet without the written consent of AI Lane Limited.

Companion artefacts available on request: the AI Lane Knowledge Library access; the LAP overview document; the per-CLID DPIA addendum template; the MCA schedule template; the deal-room workspace at ailane.ai/partners/dnb-2026/. Request channels: the deal-room itself, partnerships@ailane.ai, or via Josh Tang.

Questions about AI Lane's institutional posture, the engagement model, the data architecture, the gate framework, or any operational matter described in this document are welcome at any depth. There is no obligation to commit at any phase. The engagement model is structured to make sure you have what you need to make an informed institutional decision, asynchronously, on D&B's preferred timeline.
